Subject: Rush search request for 10/089600

Please search in commercial database, issued patent files, PGPUB and interference:
SEQ ID NO:2.
Thank you.

PT Polynucleotide encoding mammalian chondromodulin-like polypeptide useful
PT for gene therapy of various disorders by regulating growth or
PT differentiation of cells especially cancer cells.
XX
PS Claim 2; Page 77-78; 87pp; English.
XX
CC The present sequence is the human chondromodulin-like protein, Zchm1. The
CC presence of an amino-terminal hydrophobic transmembrane domain, is a
CC structural feature of class II cell surface proteins. Zchm1 may be
CC anchored on the cell membrane, via its transmembrane domain. It has
CC sequence homology to bovine and human Chm-I. The Zchm1 locus is mapped to
CC chromosome 11p15.4. It functions as a cell differentiation regulator and
CC osteoblast proliferation stimulator. Zchm1 can be used as growth or
CC differentiation regulator for cells, especially the mesenchymal,
CC myogenic, chondrogenic or endothelial cells. Zchm1 proteins or antibodies
CC are useful for identifying or treating tissues or organs expressing the
CC anti-complementary molecule, e.g., receptor or antigen. The Zchm1
CC polypeptides conjugated to drugs, toxins, radionuclides are useful for in
CC vivo diagnostic or therapeutic applications and polypeptide-toxin fusion
CC proteins are useful for targeted cell or tissue inhibition or ablation
CC for treating various disorders, especially cancer. It is useful for gene
CC therapy of disorders associated with altered Zchm1 activity

PT New mammalian DNA sequences encoding transmembrane, receptor or secreted
PT PRO polypeptides, useful for screening of potential peptide or small
PT molecule inhibitors of the relevant receptor/ligand interactions.
XX
PS Claim 12; Fig 182; 773pp; English.
XX
CC AAA37022 to AAA37144 encode the new isolated human transmembrane,
CC receptor or secreted PRO polypeptides given in AAY99340 to AAY99462. The
CC transmembrane and receptor PRO proteins can be used for screening of
CC potential peptide or small molecule inhibitors of the relevant
CC receptor/ligand interactions. The polypeptides and nucleotide sequences
CC encoding then have various industrial applications, including uses as
CC pharmaceutical and diagnostic agents. AAA37145 to AAA37330 represent PCR
CC primers and hybridisation probes used in the isolation of the PRO
CC polypeptides from the present invention

XX
PT New isolated polynucleotide encoding a secreted protein useful for
PT preventing, treating or ameliorating a medical condition.
XX
PS Claim 11; Fig 1A-B; 451pp; English.
XX
CC The polynucleotide sequences given in AAA87666 to AAA87708 encodes the
CC human secreted proteins given in AAB25665 to AAB25755. Human secreted
CC proteins have activities based on the tissues and cells the genes are
CC expressed in. Examples of activities include: immunosuppressive;
CC immunostimulant; antiinflammatory; cardiant; vulnerary; antiulcer;
CC nootropic; antiviral; anticonvulsant; antiparkinsonian; neuroprotective;
CC antibacterial; antiparasitic; thrombolytic; anticoagulant;
CC antiarteriosclerotic and cytostatic. The secreted proteins and their
CC polynucleotides can be used in gene therapy and as vaccines, chemotaxis-
CC modulators and angiogenesis- modulators. The human secreted proteins and
CC polynucleotides can be used for diagnosing (the susceptibility to) a
CC pathological condition by determining the presence or absence of a
CC mutation in the polynucleotide or determining the presence or amount of
CC expression of the protein. The polynucleotides and proteins can also be
CC used in the treatment and diagnosis of cancer, diseases of the immune
CC system, hyperproliferative disorders, cardiovascular disorders and
CC neurological disease. They can also be used to promote wound healing and
CC to fight infection. AAA87657 to AAA87665 and AAB25664 represent sequences
CC used in the exemplification of the present invention

PS Claim 1; Fig 182; 787pp; English.
XX
CC The present invention relates to secreted and transmembrane proteins.
CC These proteins and the DNA encoding them may be used as hybridization
CC probes, in chromosome and gene mapping and in the generation of anti-
CC sense RNA and DNA. They may also be used used to generate either
CC transgenic animals or knockout animals which are in turn useful for
CC development and screening of therapeutically useful reagents. The nucleic
CC acids may also be used in gene therapy

PT   Isolated , secretory and transmembrane PRO polypeptide used to detect
PT   other PRO polypeptides, link bioactive molecules to cells expressing PRO
PT   polypeptides, and detect the presence of mammalian tumors e.g. lung,
PT   breast, prostate, cervical.
XX
PS   Claim 12; Fig 524; 813pp; English.
XX
CC   AAU12172-AAU12446 represent novel human secretory and transmembrane PRO
CC   polypeptides. The PRO polypeptides are useful to detect other PRO
CC   polypeptides, to link bioactive molecules to cells expressing PRO
CC   polypeptides, to modulate biological activities of cells expressing PRO
CC   polypeptides, and to detect the presence of mammalian lung, colon,
CC   breast, prostate, rectal, cervical or liver tumours by comparing PRO
CC   polypeptide expression in a cell sample to that in a control sample. Some
CC   of the 275 sequences are also useful to stimulate the release of tumour
CC   necrosis factor-alpha (TNF-alpha) from human blood, the proliferation or
CC   differentiation of chondrocytes, the proliferation or gene expression in
CC   pericyte cells, the release of proteoglycans from cartilage, the
CC   proliferation of inner ear utricular supporting cells or of T-
CC   lymphocytes, the release of a cytokine from peripheral blood monocytes
CC   (PBMCs), or the proliferation of endothelial cells. Some of the PRO
CC   polypeptides may modulate glucose or free fatty acid uptake by skeletal
CC   muscle cells or by adipocytes; or inhibit binding of A-peptide to factor
CC   VIIA. The PRO polypeptides can be used in assays to identify molecules
CC   involved in binding interactions. The polynucleotides encoding PRO
CC   polypeptides can be used to generate probes, antisense RNA/DNA,
CC   transgenic or knock out animals and can be used in gene therapy

PT   Eighty four nucleic acids encoding PRO polypeptides, useful in molecular
PT   biology, including use as hybridization probes, and in chromosome and
PT   gene mapping.
XX
PS   Claim 12; Fig 116; 278pp; English.
XX
CC   The present sequence is a human PRO polypeptide (secreted and
CC   transmembrane). The PRO protein, and PRO agonists, PRO antagonists or
CC   anti-PRO antibodies are useful for preparation of a medicament useful in
CC   the treatment of a condition which is responsive to the PRO protein,
CC   agonists, antagonists or anti-PRO antibodies. The PRO protein may also be
CC   employed as molecular weight markers for protein electrophoresis. The PRO
CC   coding sequence has applications in molecular biology, including use as
CC   hybridisation probes, and in chromosome and gene mapping

PT New chondromodulin-I like polypeptides and polynucleotides useful for
PT treating, preventing or ameliorating diseases resulting from abnormal
PT levels of ChMIrp, or for inducing cartilage formation and bone growth.
XX
PS Claim 14; Fig 2; 189pp; English.
XX
CC The present sequence is that of human chondromodulin-I related peptide
CC (ChMIrp), as predicted from the open reading frame of an isolated cDNA
CC clone (see AAH26446). The protein is structurally related to
CC chondromodulin-I. It is expressed in the tendons, skeletal muscle,
CC thymus, ovary, cerebral cortex, intestine M cells and in cells adjacent
CC to the hair follicle. The invention provides ChMIrp polypeptides
CC (including those having the present sequence, or at least 1 conservative
CC amino acid substitution, an insertion or deletion, or C- and/or N-
CC terminal truncation, while maintaining activity) and polynucleotides, as
CC well as vectors, host cells, antibodies and recombinant methods for
CC producing the polypeptide. It also discloses therapeutic and diagnostic
CC uses for these and related products. ChMIrp may play a role in cartilage
CC development and blood vessel formation, in the development of tendons and
CC muscle and in attachment of muscle to bone, in immune function, and as a
CC growth factor in the growth and development of various tissues. It may be
CC useful for the diagnosis and/or treatment of tendon diseases (e.g.
CC tendinitis and tendon tear), skeletal muscle diseases (e.g. cachexia and
CC muscular dystrophy), immune system dysfunction diseases (e.g.
CC inflammation, allergy, poor wound healing and arthritis) and infertility
CC diseases

XX
PT New isolated secreted and transmembrane PRO polypeptide useful for
PT modulating biological activity of a cell, or for treating sports-related
PT joint problems, osteoarthritis or rheumatoid arthritis.
XX
PS Claim 20; Fig 116; 399pp; English.
XX
CC The invention relates to an isolated secreted and transmembrane PRO
CC polypeptide having 80 % sequence identity to a sequence appearing as
CC ABG95851-ABG95934 or their associated signal peptide, or a sequence of an
CC extracellular domain of the proteins with their associated signal peptide
CC or lacking its associated signal peptide. Also included are the nucleic
CC acids encoding the proteins, vectors, host cells, fusion proteins and
CC antibodies which specifically bind to the proteins. The proteins are
CC useful for detecting a polypeptide designated as A, B, C or D in a sample
CC suspected of containing an A, B, C or D polypeptide, by contacting the
CC sample with a polypeptide designated as E, F, G, H or I (or vice versa)
CC and determining the formation of a A/E, B/F, B/G, C/H or D/I polypeptide
CC conjugate in the sample, where the formation of the conjugate is
CC indicative of the presence of an A, B, C or D polypeptide in the sample,
CC where A is a PRO10272 polypeptide, B is a PRO20110 polypeptide, C is a
CC PRO10096 polypeptide, D is a PRO19760 polypeptide, E is a PRO5801
CC polypeptide, F is a PRO1 polypeptide, G is a PRO20040 polypeptide, H is a
CC PRO20233 polypeptide and I is a PRO1890 polypeptide. The sample comprises
CC a cell suspected of expressing the A, B, C or D polypeptide. The E, F, G,
CC H or I polypeptide is labeled with a detectable label or is attached to a
CC solid support. The proteins are useful for linking a bioactive molecule
CC to a cell expressing a polypeptide designated as A, B, C or D or E, F, G,
CC H or I. The bioactive molecule is a toxin, a radiolabel or an antibody.
CC The bioactive molecule causes death of the cell. A, B, C, D, E, F, G, H,
CC or I, or antibodies against them are useful for modulating a biological
CC activity of a cell expressing a polypeptide designated as A, B, C or D or
CC E, F, G, H, or I. The cell is killed. The proteins are useful for
CC identifying agonists or antagonists, for the preparation of a medicament
CC useful in the treatment of a condition which is responsive to the
CC proteins, as molecular weight markers for protein electrophoresis
CC purposes, and as therapeutic agents for treating sports-related joint
CC problems, articular cartilage defects, osteoarthritis or rheumatoid
CC arthritis. Nucleic acids encoding the proteins are useful as
CC hybridisation probes, in chromosome and gene mapping, in the generation
CC of anti-sense RNA and DNA, for the preparation of the proteins, to
CC generate transgenic or knockout animals which are useful in the
CC development and screening of therapeutic useful reagents, for chromosome
CC identification, and in gene therapy. The antibody is useful as a
CC therapeutic agent, in a diagnostic assay and for affinity purification of
CC the protein from recombinant cell culture natural sources. The present
CC sequence represents a novel secreted or transmembrane protein of the
CC invention

PT New secreted and transmembrane PRO nucleic acids, for treating
PT inflammation, organ failure, atherosclerosis, cardiac injury,
PT infertility, birth defects, premature aging, axquired immunodeficiency
PT syndrome (AIDS), or cancer.
XX
PS Claim 12; Fig 524; 660pp; English.
XX
CC The invention describes an isolated nucleic acid (I) comprising, or which
CC has 80 % sequence identity to, or the full-length coding sequence of, one
CC of 275 nucleotide sequences, and which encodes a corresponding
CC polypeptide selected from 275 amino acid sequences, where all sequences
CC are given in the specification. The polypeptide encoded by (I) is used to
CC detect PRO polypeptides, link a bioactive molecule to a cell expressing a
CC PRO polypeptide, modulate a biological activity of a cell, stimulate the
CC release of tumour necrosis factor (TNF)-alpha from human blood, modulate
CC the uptake of glucose or free fatty acid by cells, stimulate or inhibit
CC the proliferation or differentiation of cells or gene expression,
CC stimulate the release of proteoglycans, stimulate the release of cytokine
CC from peripheral blood mononuclear cells, inhibit the binding of A-peptide
CC to factor VIIA, or detect the presence of tumour in a mammal. The nucleic
CC acid and polypeptide encoded by it, are useful for treating inflammatory
CC diseases, organ failure, atherosclerosis, cardiac injury, infertility,
CC birth defects, premature aging, acquired immunodeficiency syndrome
CC (AIDS), cancer, or diabetic complications. The nucleic acid is useful as
CC hybridisation probes, in chromosome and gene mapping, and in generating
CC antisense RNA or DNA. The polypeptides are useful as pharmaceuticals,
CC diagnostics, biosensors or bioreactors. Both are useful in tissue typing.
CC This is the amino acid sequence of a novel human secreted and
CC transmembrane PRO polypeptide

```
PT   New isolated PRO polypeptide useful for treating diabetes, rheumatoid
PT   arthritis, sports injuries, obesity, hearing loss in mammals, stroke, or
PT   heart attack.
XX
PS   Claim 12; Fig 524; 643pp; English.
XX
CC   The present invention relates to the isolation of novel human PRO
CC   polypeptides, and the polynucleotide sequences encoding them. The PRO
CC   polypeptides are secreted and transmembrane proteins. The PRO
CC   polypeptides and polynucleotides are useful for preparing a medicament
CC   useful in the treatment of diabetes, bone and/or cartilage disorders
CC   (e.g. rheumatoid arthritis, sports injuries, osteoarthritis), obesity,
CC   hyper- or hypo-insulinaemia, hearing loss, and coagulation disorders
CC   (e.g. stroke, heart attack). Anti-PRO antibodies are useful in diagnostic
CC   assays for PRO, by detecting its expression in specific cells, tissues or
CC   serum, and for affinity purification of PRO from recombinant cell culture
CC   or natural sources. ABU80870-ABU81144 represent the human PRO
CC   polypeptides of the invention. Note: The sequence data for this patent
CC   was obtained in electronic format directly from the USPTO web site at
CC   seqdata.uspto.gov/psipsDIDEntry.html

PT   purification of PRO polypeptides, and for preparing a medicament for
PT   diagnosing or treating conditions responsive to the antibody or PRO
PT   polypeptide.
XX
PS   Disclosure; Fig 116; 345pp; English.
XX
CC   The invention describes an antibody that specifically binds to a PRO
CC   polypeptide having a fully defined amino acid sequence given in the
CC   specification. The antibody is useful in identifying PRO polypeptides
CC   useful for various industrial applications, including pharmaceuticals,
CC   diagnostics, biosensors and bioreactors. The antibody is also used for
CC   affinity purification of PRO polypeptides from recombinant cell culture
CC   or natural sources. The antibody, PRO polypeptide, or its agonists or
CC   antagonists, may be used for preparing a medicament for diagnosing or
CC   treating a condition responsive to the antibody, PRO polypeptide, or its
CC   agonists or antagonists. This is the amino acid sequence of a novel human
CC   secreted and transmembrane PRO polypeptide

PT New isolated antibody specifically binding a PRO polypeptide, useful for
PT the preparation of a medicament for treating disorders with the aberrant
PT expression or activity of the PRO polypeptide, such as tumor conditions
PT and cancer.
XX
PS Disclosure; Fig 116; 223pp; English.
XX
CC The invention relates to an antibody that binds to a secreted or
CC transmembrane protein designated PRO1446 appearing as ABO33941. The
CC protein is one of 84 PRO polypeptides which (along with their encoding
CC nucleic acids) are disclosed in the specification. The methods and
CC compositions of the present invention are useful for the preparation of a
CC medicament for the treatment of disorders associated with the aberrant
CC expression or activity of the PRO polypeptide, such as tumour conditions
CC and cancer. They can also be used to generate transgenic or knockout
CC animals useful in the development and screening of therapeutically useful
CC reagents. The PRO polypeptides and encoding nucleic acids can be used as
CC molecular weight markers for protein electrophoresis, chromosome
CC identification and tissue typing. The antibodies may be used in various
CC diagnostic, competitive binding and/or immunoprecipitation assays. The
CC present sequence represents a PRO polypeptide

PT New secreted and transmembrane PRO polypeptides and nucleic acid
PT molecules encoding the polypeptides, useful in gene therapy or preparing
PT a medicament for treating a condition that is responsive to the PRO
PT polypeptide or antibody.
XX
PS Disclosure; Fig 116; 409pp; English.
XX

CC The invention describes novel isolated PRO polypeptides. The PRO
CC polypeptides or anti-PRO antibodies are useful in preparing a medicament
CC for treating a condition that is responsive to the PRO polypeptide or
CC antibody. The PRO nucleotide sequences may be used as hybridisation
CC probes in chromosome and gene mapping, or in generating antisense RNA and
CC DNA. PRO nucleic acids are also useful in preparing PRO polypeptides, in
CC assays to identify other proteins or molecules involved in binding
CC reaction, to generate transgenic animals or knockout animals, which in
CC turn are useful in the development and screening of therapeutically
CC useful reagents, for chromosome identification, and tissue typing. The
CC PRO polypeptides and nucleic acid molecules are also useful in gene
CC therapy, and as molecular weight markers for protein electrophoresis
CC purposes. The anti-PRO antibodies may be used in diagnostic assays for
CC PRO, or for the affinity purification of PRO from recombinant cell
CC culture or natural sources. This is the amino acid sequence of a novel
CC human secreted and transmembrane PRO poypeptide

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CC   -!- FUNCTION: May be an angiogenesis inhibitor.
CC   -!- SUBCELLULAR LOCATION: Type II membrane protein (Potential).
CC   -!- TISSUE SPECIFICITY: Highly expressed in eye, skeletal muscle and
CC       rib.
CC   -!- DEVELOPMENTAL STAGE: Expression begins at day 11 and is maintained
CC       during the development of embryo.
CC   -!- SIMILARITY: Belongs to the chondromodulin-I family.
CC   -!- SIMILARITY: Contains 1 BRICHOS domain.

CC   -!- FUNCTION: Bifunctional growth regulator that stimulates the growth
CC       of cultured chondrocytes in the presence of basic fibroblast
CC       growth factor (FGF) but inhibits the growth of cultured vascular
CC       endothelial cells. May contribute to the rapid growth of cartilage
CC       and vascular invasion prior to the replacement of cartilage by
CC       bone during endochondral bone development (By similarity).
CC   -!- SUBCELLULAR LOCATION: Cytoplasmic and secreted. Accumulated in the
CC       inter-territorial matrix of cartilage (By similarity).
CC   -!- PTM: After cleavage, the post-translationally modified ChM-I is
CC       secreted as a glycoprotein (By similarity).
CC   -!- SIMILARITY: Belongs to the chondromodulin-I family.
CC   -!- SIMILARITY: Contains 1 BRICHOS domain.

RA   Hiraki Y., Shukunami C.;
RT   "Chondromodulin-I as a novel cartilage-specific growth-modulating
RT   factor.";
RL   Pediatr. Nephrol. 14:602-605(2000).
CC   -!- FUNCTION: Bifunctional growth regulator that stimulates the growth
CC       of cultured chondrocytes in the presence of basic fibroblast
CC       growth factor (FGF) but inhibits the growth of cultured vascular
CC       endothelial cells. May contribute to the rapid growth of cartilage
CC       and vascular invasion prior to the replacement of cartilage by
CC       bone during endochondral bone development.
CC   -!- SUBCELLULAR LOCATION: Cytoplasmic and secreted. Accumulated in the
CC       inter-territorial matrix of cartilage.
CC   -!- TISSUE SPECIFICITY: Nasal and articular cartilage, and fetal
CC       epiphysis.
CC   -!- PTM: After cleavage, the post-translationally modified ChM-I is
CC       secreted as a glycoprotein.
CC   -!- PTM: Two other smaller nonglycosylated chondromodulin forms (9 kDa
CC       and 7kDa) are found either in developing articular cartilage or in
CC       chondrocytes. The 9 kDa form could be processed by an
CC       extracellular matrix-associated protease as a metalloproteinase
CC       and the 7 kDa form could be processed intracellularly.
CC   -!- SIMILARITY: Belongs to the chondromodulin-I family.
CC   -!- SIMILARITY: Contains 1 BRICHOS domain.

CC   -!- FUNCTION: Potential corepressor protein, which may affect
CC       chromatin structure and/or transcription. May participate in the
CC       transcriptional repression of the presenilin protein hop-1.
CC   -!- SUBCELLULAR LOCATION: Nuclear.
CC   -!- TISSUE SPECIFICITY: Widely expressed.
CC   -!- MISCELLANEOUS: Loss of function results in a suppression of sel-12
CC       mutant phenotypes, possibly by upregulating hop-1 expression.
CC   -!- SIMILARITY: Belongs to the nucleosome assembly protein (NAP)
CC       family.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
